

Error Face

The error that I face on practical 1:

In problem 1 I face the error that how can I shift leftmost item to the rightmost how can I do this , how can I implement the logic for this because the issue is that after some rotations the items come back to the same position that it occurs before. So , then I understand the logic and write the code.

In problem 2 I face the error that how can I identify the longest word , because there are spaces in the sentences so it becomes difficult to understand that which is the longest word and how can I calculate the length of the longest word as it I asked to calculate in the question so I understand the logic step by step and then I implement it.
